ABOUT ME

I am a naturally inquisitive and curious person. I have always desired to understand what makes things tick. I often find myself asking, "How does that work?" and, "If I take this apart, can I put it back together?" My curiosity is the one unbreaking through line in my life. From my undergraduate studies, to the jobs have had, I have always been driven by an unwavering desire to learn and experience new things. The Nashville Software School provided an exceptional opportunity to learn software development in a classroom setting. While classrooms offer a structured curriculum and administrative guidance, they also provide occasion to learn with, from, and among others.

CAPSTONE PROJECTS

ReeBox is a solo project that was developed from the ground up with **Webpack/React/Javascript/HTML5/ Firebase Auth/Storage/Database**
